

Moneris® Core Restaurant

Moneris Core Restaurant is a Moneris Core payment application module that connects to any restaurant point of sale (POS) system. It provides added value by simplifying the merchant experience.

In addition, Moneris Core Restaurant standardizes the communication between POS systems and devices that are supported by Moneris Core. This gives merchants and integrators the flexibility to support any device in almost any environment.

Cloud and local communication through single integration

- Enables support for multiple terminals and communication types
- Gives merchants the flexibility to choose the communication method that works best for them, whether cellular (4G), wireless local area network, or a mix of both
- Removes the need for middleware to connect a POS solution to the payment terminal or application
- Enables merchants with large service areas to support a restaurant integration by connecting the terminal to a POS using 4G and cloud-based services. Includes patios, walled-off areas, delivery services, and anywhere else you need to bring your terminal.
- Makes integration simple to reduce setup time with a JSON API message format

Greater uptime and reliability

- Helps reduce downtime by supporting connectivity through both 4G and wireless local area network
- Supports store and forward functionality that securely encrypts and stores transaction data in the event of downtime, allowing for continued processing of transactions

Dynamic Currency Conversion (DCC)

- Option of enabling DCC service that offers international customers the choice to pay in their own currency¹
- Provides real-time conversions
- Does not require integration work

E-receipts with line-item data

- Provides the option to generate receipts to send to cardholders, via email or text, that include line-item order information

¹Additional fees, terms and conditions may apply to the use of Dynamic Currency Conversion features.

Moneris Core Wireless

V400m – 4G + Wi-Fi

Communication Method

- Wireless local area network through cloud-based services
- 4G through cloud-based services

Move/5000 – 4G + Wi-Fi

Communication Method

- Wireless local area network through cloud-based services
- 4G through cloud-based services

Move/5000 – Wi-Fi only

Communication Method

- Wireless local area network direct through LAN
- Wireless local area network through cloud-based services

Moneris Core Countertop

V400c

Communication Method

- Direct through ethernet
- Cloud-based through ethernet

Desk/5000

Communication Method

- Direct through ethernet
- Cloud-based through ethernet
